Cloak

Dress up your space

Cloak

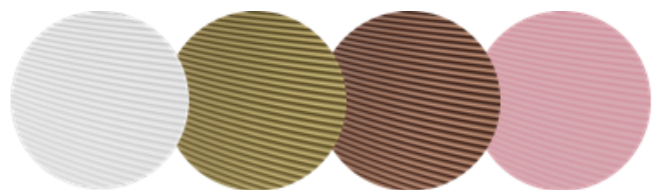

The pendant was inspired by the layered fabrics of fashion; allowing individuals to express their individual style and create a unique, layered light effect by tailoring the cloaks, that can be produced at scale.

Thanks to the fact that the 3D printing manufacturing technology does not have a smooth finishing and thanks to the layered cloaks, the light effect became surprisingly unique and attractive.

Basten Leijh, the product designer, expressed his emotions during working on the project: "The challenge I faced was to make it look less technical. By layering over a basic form, much like a beautiful garment that follows a body, I hope to achieve that. The lines of the material and the light effect further enhances this draped fabric, creating an even stronger impact!"

Illuminate your space with the Cloak pendant by tailoring the cloaks for a personal touch and experience the harmonious blend of sustainability, creativity, and design.
